## **DETAILED ACTION**

### ***Election/Restrictions***

1. This application is in condition for allowance except for the presence of claims 16-21 to an invention non-elected without traverse. Accordingly, claims 16-21 have been cancelled.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. The following amendment is being made to place the application in condition for allowance.

↙ The application has been amended as follows:  
Cancel claims 16-21.

### ***Allowable Subject Matter***

3. Claims 1-15 are allowed.

4. The following is an examiner's statement of reasons for allowance - -the prior art of record and to the examiner's knowledge does not teach or render obvious, at least to the skilled artisan, the instant invention regarding a photo-semiconductor module wherein a light-receiving flip-chip is attached to a circuit board and an optical fiber is

*fixed* to the mounting face or back face of the flip-chip. Through the applicant's comments to the non-final rejection and in conjunction with the applicant's specification and drawings, the examiner is interpreting "fixed" as meaning direct physical attachment. Claims 2-15 are dependent (directly or indirectly) on claim 1.

5. The following references are cited as being particularly relevant to the applicant's invention:

Sakurai et al. (6,623,178 B1) – See for example figure 8, wherein an optical fiber is mounted through a board to directly beneath a flip-chip optical module. However, the However, as described in column 1, lines 6-18, the optical fiber does not physically touch the flip-chip.

Parat et al. (6,435,733 B1) – see figure 6, wherein an optical fiber is mounted close to a flip-chip device; the optical fiber does not actually touch the flip-chip.

Tachigori (6,403,948 B1) – similar to that of Parat et al.; an optical fiber is mounted close to a flip-chip device, but does not actually touch it. See figures 7 or 9.

Tabuchi (5,764,832) – See for example figures 20 and 21; an optical fiber is mounted beneath a flip-chip module, but eh optical fiber does not come into physical contact with the flip-chip.

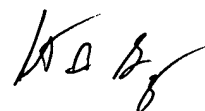

Frigo et al. (5,625,733) – See for example figure 3, wherein a flip-chip module is mounted to the end of an optical fiber. However, the flip-chip also utilizes spacers (302) to maintain physical separation between the flip-chip and the fiber.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
